

Animal Care

VOCATIONAL

Level 2 & 3

Entry requirements

- Acceptance on the course will be by interview
- Some theory work and some ability in a science subject such as Biology will be helpful at Level 1
- At Level 2, a Science GCSE would help show you are capable of the theory work
- You will need to like animals and be very patient with them

Why choose this course?

There will be a great deal of practical work during your training including a lot of cleaning up! You will need to show that you are prepared for the hard work involved. Although much of the training is through a work placement there are days of theory work. You will need to be capable of some project work and be able to build a portfolio of your experiences in animal care.

Pets and other domestic animals as well as captive animals in zoos are unable to care for themselves and need people to provide them with food, water, exercise and help when they are unwell. There are many professionals who take care of animals, when their owners are away or when the animals need special care. These include vets and veterinary nurses but also kennel staff, pet shop assistants and zoo keepers.

Topics covered include: diseases and disorders; feeding and nutrition and animal biology.

Further information?

For more information talk to your Vocational Lead or call our Sixth Form on 01752 720031
